

What is claimed is:

1. A galley for preparing food and drink in an aircraft, comprising:

a galley body composed of a panel member, a storage unit formed to the galley body for storing a device, and an electric device disposed detachably in the storage unit; wherein

the storage unit is equipped with a rail for guiding the electric device, a pair of guide holders, and a connector disposed between the guide holders;

the electric device is equipped with a pair of guide pins that engage with the pair of guide holders, and a connector; and

the guide pins and the guide holders have a photocoupler disposed thereto.

2. A galley for preparing food and drink in an aircraft, comprising:

a galley body composed of a panel member, a storage unit formed to the galley body for storing a device, and an electric device disposed detachably in the storage unit; wherein

the storage unit is equipped with a rail for guiding the electric device, a pair of guide pins, and a connector disposed between the guide pins;

the electric device is equipped with a pair of guide holders that engage with the pair of guide pins, and a connector; and

the guide pins and the guide holders have a photocoupler

disposed thereto.

3. The galley of an aircraft according to claim 1 or claim 2, wherein a first guide pin of the pair of guide pins comprises a light emitting member of the photocoupler and a second guide pin comprises a light receiving member of the photocoupler, and a first guide holder that engages the first guide pin comprises a light receiving member of the photocoupler and a second guide holder that engages the second guide pin comprises a light emitting member of the photocoupler.
